Bart,

I think that this is the property that Todd and I went to during my initial site visit. Samples may have been collected at the property during previous assessments.

Todd, did you guys collect any samples at the referenced location?

Subject: Wilcox resident house over former pond area and high lead area

See the attached photo. It shows a residence over a former suspected pond area of what was the refinery in 1956. This is close to the area where the high lead samples were found. (The blue circle within the blue rectangle).

I am trying to get this residence located over a current photograph/map to better define its current position. (Will share that with you once I get it)

Since this is near the high lead area, will you consider taking some samples around that house?

I am checking with ODEQ to see if they know the owner and address and if they have more info on this property.
